Professional Summary

Computer Science Engineering student with hands-on experience in Linux, AWS Cloud, Docker, Git, and basic CI/CD using GitHub Actions. Built and deployed cloud-native applications, including scalable AWS infrastructure and multi-cloud projects using React.js and Node.js. RHCSA certified with a strong interest in Cloud Computing, DevOps, and Infrastructure Automation, seeking opportunities to apply and expand practical cloud engineering skills.

Technical Skills

- **Cloud (AWS):** EC2, S3, VPC, CloudFront, IAM, Security Groups, Auto Scaling, Load Balancing, RDS, AWS CLI, CloudWatch
- **DevOps & Containers:** Docker, Podman, CI/CD (GitHub Actions basics), Container Lifecycle Management
- **Linux Administration:** RHEL/CentOS, User & Group Management, File Permissions, systemctl, Storage Management, Network Configuration, Firewall Rules (firewalld/iptables), SSH, Log Analysis
- **Scripting & Programming:** Bash/Shell Scripting, JavaScript, Node.js, Python (Basics), C/C++
- **Networking:** TCP/IP, DNS basics, HTTP/HTTPS, VPC Subnets, Security Groups
- **Monitoring & Support:** CloudWatch, Linux System Logs, Incident Troubleshooting, SSH-based Remote Support, Remote Server Access, Linux Package Management
- **Version Control & Web:** Git, GitHub, HTML, CSS, React

Certifications

Red Hat Certified System Administrator (RHCSA) — Score: 270/300

Aug 2025

Credential ID: 260-017-439 — MIT-Red Hat Training Division, Chhatrapati Sambhajinagar (Virtual)

- Administered Linux file systems, user/group management, permissions, and systemctl-based service management on RHEL.
- Configured storage management, network interfaces, and firewall rules in enterprise Linux environments.
- Gained hands-on container management experience aligned with Docker/Podman concepts.

Projects

Production-Ready CRUD Application Deployment on AWS [\[GitHub\]](#) *AWS EC2, Auto Scaling Group, Application Load Balancer, Amazon RDS, Amazon ECR, Docker, CloudWatch*

- Deployed a Dockerized Node.js CRUD application on Amazon EC2 using an Application Load Balancer for high availability and traffic distribution.
- Configured an Auto Scaling Group with CloudWatch policies to automatically scale EC2 instances based on CPU utilization (>50%).
- Integrated Amazon RDS MySQL as the backend database and managed container images through Amazon ECR using secure environment variable configuration.

InfraSense – Cloud Infrastructure Recommendation Platform [\[GitHub\]](#)

[\[Live Demo\]](#)

Technologies: React.js, Node.js, Docker, AWS, Azure, GCP

- Developed a platform that recommends cloud infrastructure across AWS, Azure, and GCP based on application requirements.
- Built using React.js, Node.js, and Docker, providing cloud service recommendations for compute, storage, Databases, and security.
- Deployed the application with a custom domain, showcasing multi-cloud architecture knowledge and containerized deployment.

Education

Bachelor of Technology in Computer Science & Engineering

2023 – 2027

Maharashtra Institute of Technology, Aurangabad

Senior Secondary (XII) – Science

2023

Maharashtra Udaygiri Mahavidyalaya, Udgir
