Professional Summary

Computer Science Engineering student and RHCSA-certified Linux administrator with hands-on experience in AWS cloud services, Linux system administration, Docker, and deployment workflows. Skilled in configuring cloud infrastructure, troubleshooting Linux environments, managing secure access controls, and deploying containerized applications. Built practical projects using AWS EC2, S3, CloudFront, Docker, and Node.js with strong understanding of cloud support, Linux administration, and technical troubleshooting. Seeking opportunities in Cloud, Linux Administration, Cloud Support, and Technical Support roles.

Technical Skills

- **Cloud (AWS):** EC2, S3, VPC, CloudFront, IAM, Security Groups, Auto Scaling, Load Balancing, RDS (basics), AWS CLI, CloudWatch
- **DevOps & Containers:** Docker, Podman, CI/CD (GitHub Actions basics), Container Lifecycle Management
- **Linux Administration:** RHEL/CentOS, User & Group Management, File Permissions, systemctl, Storage Management, Network Configuration, Firewall Rules (firewalld/iptables), SSH, Log Analysis
- **Scripting & Programming:** Bash/Shell Scripting, JavaScript, Node.js, Python (Basics), C/C++
- **Networking:** TCP/IP, DNS basics, HTTP/HTTPS, VPC Subnets, Security Groups, SSH Tunneling
- **Monitoring & Support:** CloudWatch, Linux System Logs, Incident Troubleshooting, SSH-based Remote Support, Remote Server Access, Linux Package Management
- **Version Control & Web:** Git, GitHub, HTML, CSS, React

Certifications

Red Hat Certified System Administrator (RHCSA) — Score: 270/300

Aug 2025

Credential ID: 260-017-439 — MIT-Red Hat Training Division, Chhatrapati Sambhajinagar (Virtual)

- Administered Linux file systems, user/group management, permissions, and systemctl-based service management on RHEL.
- Configured storage management, network interfaces, and firewall rules in enterprise Linux environments.
- Gained hands-on container management experience aligned with Docker/Podman concepts.

Projects

Containerized Node.js Application Deployment on AWS EC2 [github.com/Ismail-dcode/Node-app-Local-Hosting]

Technologies: AWS EC2, Docker, Node.js, IAM, Linux, Bash

- Developed and deployed a containerized Node.js application on AWS EC2 using Docker and Linux environments.
- Reduced manual deployment steps by ~40% through reusable Docker images and simplified container execution workflows.
- Configured AWS networking components including VPC and Security Groups for secure client-server communication.
- Implemented persistent container runtime policies to improve service uptime and deployment reliability.
- Managed cloud authentication and authorization using IAM roles and SSH key-pair access control.

AWS S3 + CloudFront Static Image Delivery System [github.com/Ismail-dcode/AWS-S3-CloudFront-Project]

Technologies: AWS S3, CloudFront, IAM, Bucket Policies

- Developed a cloud-native static asset delivery system using AWS S3 and CloudFront CDN architecture.
- Improved user content access speed through distributed edge caching and optimized object delivery.
- Configured secure storage permissions and bucket policies for controlled public asset accessibility.
- Optimized storage utilization and delivery performance using AWS-managed infrastructure services.
- Showcased end-to-end cloud deployment architecture with a publicly accessible production endpoint.

Education

Bachelor of Technology in Computer Science & Engineering

2023 – 2027

Maharashtra Institute of Technology, Aurangabad

Senior Secondary (XII) – Science

2023

Maharashtra Udaygiri Mahavidyalaya, Udgir
